

33. In a study of claim payment times, you are given:

- (i) The data were not truncated or censored.
- (ii) At most one claim was paid at any one time.
- (iii) The Nelson-Aalen estimate of the cumulative hazard function, $H(t)$, immediately following the second paid claim, was $23/132$.

Determine the Nelson-Aalen estimate of the cumulative hazard function, $H(t)$, immediately following the fourth paid claim.

- (A) 0.35
- (B) 0.37
- (C) 0.39
- (D) 0.41
- (E) 0.43
