

- 92.** Prescription drug losses,  $S$ , are modeled assuming the number of claims has a geometric distribution with mean 4, and the amount of each prescription is 40.

Calculate  $E[(S - 100)_+]$ .

- (A) 60
- (B) 82
- (C) 92
- (D) 114
- (E) 146
