

## Question #177

Key: C, E

The distribution of  $\Theta$  is Pareto with parameters 1 and 2.6. Then,

$$v = EPPV = E(\Theta) = \frac{1}{2.6-1} = 0.625, \quad a = VHM = Var(\Theta) = \frac{2}{1.6(0.6)} - 0.625^2 = 1.6927,$$

$$k = v/a = 0.625/1.6927 = 0.3692, \quad Z = \frac{5}{5+0.3692} = 0.9312.$$
