

Question #270

Key: C

The sample means are 3, 5, and 4 and the overall mean is 4. Then,

$$\hat{v} = \frac{1+0+0+1+0+0+1+1+1+1+1+1}{3(4-1)} = \frac{8}{9}$$

$$\hat{a} = \frac{(3-4)^2 + (5-4)^2 + (4-4)^2}{3-1} - \frac{8/9}{4} = \frac{7}{9} = 0.78.$$
