

**278-282.** Use the following information for questions 278-282.

A 30-year term insurance on Janet age 30 and Andre age 40 provides the following benefits:

- A death benefit of 140,000 if Janet dies before Andre and within 30 years.
- A death benefit of 180,000 if Andre dies before Janet and within 30 years.

You are given:

- (i) Mortality for both Janet and Andre follows  $l_x = 100 - x$ ,  $0 \leq x \leq 100$ .
- (ii) Their future lifetimes are independent.
- (iii)  $i = 0$
- (iv) The death benefit is payable at the moment of the first death.
- (v) Premiums are payable continuously at rate  $P$  while both are alive, for a maximum of 20 years.

**278.** Calculate the probability that at least one of Janet and Andre will die within 10 years.

- (A)  $1/42$
- (B)  $1/12$
- (C)  $1/7$
- (D)  $2/7$
- (E)  $13/42$
